

voyzSESSION 1.5.2: Stream Deck on board, and a window for the booth

The DAW for voice production can now be driven from a Stream Deck, merges loop and punch into one range in the ruler, and gains a window of its own for the monitor in the recording booth.

Siegburg, Germany, 15 September 2026 – pegelWERK releases version 1.5.2 of voyzSESSION, the DAW for voice production. This version is about operating the app: Elgato's Stream Deck is supported, loop and punch have become a single range in the ruler, and a new booth window feeds the screen next to the speaker.

The Stream Deck plugin ships inside the app, along with a ready-made layout for Stream Deck, MK.2, Mini, XL and Plus – installed and loaded from the menu, one file per device. The keys report back what the app is doing: active functions light up, labels and values come from the interface, and a key that cannot act right now says so. On the Stream Deck Plus the dials carry level and pan of the selected track, pressing a dial resets its value, and the touch strip shows which page you are on.

A console and a Stream Deck can run side by side: the feedback channel now serves several control surfaces instead of just one. Alongside MakePro X desks, Mackie Control and OSC, that makes a fourth way into remote control.

In the ruler, loop and punch have become one range. Drag it out, move it, stretch it by its edge, double-click to clear it. LOOP now only toggles repeat; whether recording happens inside the range hangs off the record button, whose icon shows the mode. Markers can now be dragged in the ruler and deleted with a double-click as well.

The new booth window (Cmd+Shift+B) puts prompter, picture, timecode and a red recording tally on a second screen – meant for the monitor in the recording booth.

Two silent failures speak up from this version on: a failing autosave and a failed video export used to look like success. The app also says when neural noise removal is unavailable and it is using the built-in denoiser instead.

Since the 1.5.0 release there has also been version 1.5.1 – with the "Studio 0 dB" format profile for studios that supply material and do not work to a loudness target, with PDF scripts in the prompter, and with fixes for the cue bus, plugin loading and the virtual camera.

NEW IN 1.5.2

- Stream Deck is supported: the plugin ships inside the app, along with a ready-made layout for Stream Deck, MK.2, Mini, XL and Plus
- The keys report back: active functions light up, labels and values come from the interface, and a key that cannot act says so
- Stream Deck Plus: level and pan of the selected track on the dials, a press resets the value, the touch strip shows the page
- A console and a Stream Deck at the same time – the feedback channel serves several control surfaces instead of just one
- Loop and punch are one range in the ruler: drag it out, move it, stretch it by its edge, double-click to clear
- Markers can be dragged in the ruler and deleted with a double-click; "Set marker" takes the next free slot

- New booth window (Cmd+Shift+B) for a monitor at the speaker: prompter, picture, timecode and a red recording tally
- A failing autosave, a failed video export and missing neural noise removal now speak up instead of looking like success
- The help page is readable at arm's length; active controls are consistently blue, measurements green, recording red

AVAILABILITY

voyzSESSION 1.5.2 is available for download at pegelwerk.com. The update is free for existing customers. The subscription costs EUR 24.99 per month or EUR 249 per year, each including VAT and cancellable monthly. A full seven-day trial is available – no account, no email address. voyzSESSION runs on macOS.

ABOUT PEGELWERK

pegelWERK is an independent audio software company based in Siegburg, Germany, founded by Sascha Hömske. The lineup covers native apps for macOS, iPadOS and iPhone around broadcast, post production and voiceover. All apps share the same EBU R128 DSP engine. More at pegelwerk.com.
