

# A focused voice-over DAW for the broadcast editorial gap

SATK Overdub Studio Pro releases for macOS and iPad, filling the workflow gap between full-fledged DAWs and NLE-internal audio for newsroom and sports voice-over against picture.

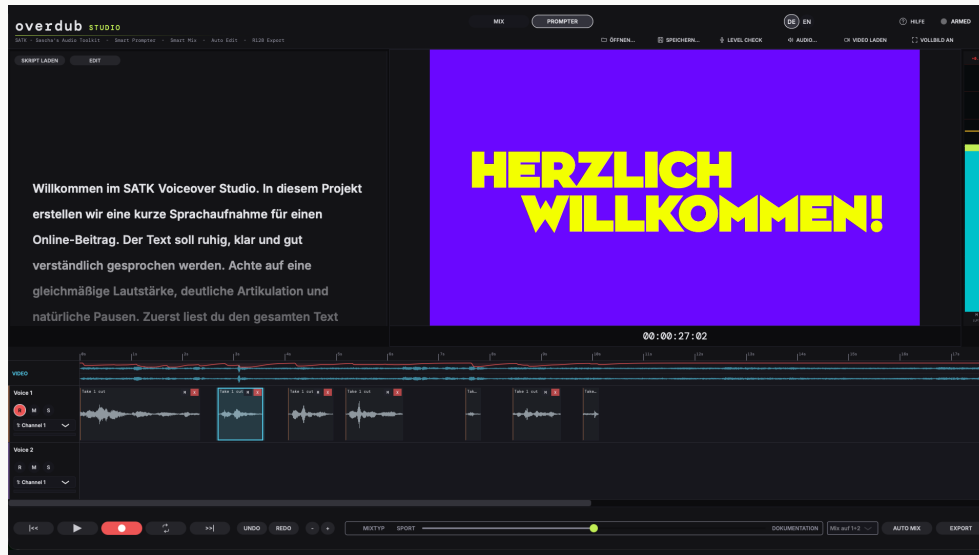

Mix view. German UI shown; English UI also available.

Independent audio software studio SATK has released Overdub Studio Pro 1.0.x, a standalone voice-over DAW for macOS and iPad. The tool addresses a familiar problem in broadcast newsrooms and sports production: voicing a 90-second to 5-minute package against picture, whether a news report or a post-match sports highlight, today either burns an engineering slot on a Pro Tools session or gets handled in NLE-internal audio without proper R128 normalization. Overdub Studio Pro fills the gap with a single-purpose workflow.

**"Pro Tools stays the right tool for real mix work. This handles the upstream editorial task it is overkill for."**

The single-click AutoMix runs a fixed signal chain on voice and bed audio: HP80, 5-band parametric EQ, RMS-detection compressor and tube saturation on voice; 10 ms sidechain ducker on the bed; SSL-style bus compressor, tape saturation and air shelf on the bus; R128 normalization to -23 LUFS with a 4x oversampled True Peak limiter on output.

For broadcast delivery, MXF round-trips keep the original picture stream-copied bit-identical. The mix can be routed to the configured track pair (sum on 1+2, or alongside the preserved IT track on 3+4), with source M and E tracks carried through untouched. A companion MP4 with the mix as AAC stereo is generated automatically alongside any MXF export, because QuickTime cannot reliably play multi-track IT MXF without auto-downmixing the eight mono tracks through a 7.1 matrix.

Prompter view. Apple Speech Recognition scrolls with the speaker's voice, on-device.

#### QUICK FACTS

|              |                                                      |
|--------------|------------------------------------------------------|
| Platforms    | macOS 13+ (Apple Silicon recommended), iPadOS 16+    |
| UI languages | English, German                                      |
| Input        | MXF, MOV, MP4                                        |
| Export       | MP4, MOV, MXF (multi-track), WAV stems               |
| Loudness     | EBU R128 / ITU-R BS.1770-4, target -23 LUFS          |
| Pricing      | Mac EUR 199 one-time, iPad EUR 12.99/mo or EUR 89/yr |
| Trial        | 7 days, no credit card                               |
| Released     | May 2026                                             |
